hosted exchange /07

Proximity Hosted Exchange 2007 provides a powerful service that enables always available business information, to which employees can connect with any mail compliant device, anytime and from anywhere.

Whether you are looking to update an existing email facility or require a first time solution, Proximity's Hosted Exchange 2007 enables you to benefit from a fully hosted enterprise class email infrastructure using all the functionality of Microsoft Exchange Server to deploy Outlook email, calendaring, contacts and tasks, without exposure to unpredictable capital and operational cost.

Proximity's Hosted Exchange helps organisations protect themselves from e-mail-borne malware, satisfy retention requirements for compliance, encrypt data to preserve confidentiality, and preserve access to e-mail during and after emergency situations. Hosted in our world class data centers, our service is fully resilient and secure with multi-tiered spam and antivirus protection. With no upfront capital costs, no need to worry about the hardware and time costs of upgrades, predictable monthly service fees and our expertise to assist you in getting started, Proximity's Hosted Exchange 2007 becomes the perfect solution for your business.

Benefits of a Hosted Exchange:

- You benefit from an enterprise class email infrastructure, with access to email, calendar, contacts and files at home, in the office or on a mobile device, boosting productivity
- Save on upfront costs of hosting an Exchange server in house along with the staff required to maintain it
- For smaller businesses, you can enjoy the same enterprise benefits that larger competitors use, but at a price that is more affordable
- Adding new users is easy – even when users leave, accounts can be deleted to ensure you only pay for the active accounts each month
- Secured email – Proximity Exchange means that all your data is stored centrally in a database on the server. Even if your PC crashes or your lap top is stolen, your data and emails will not be lost
- All emails are scanned for viruses and the Exchange server prevents viruses from accessing your mailbox and PC
- Spam filters ensure that spam is removed before it reaches the users inbox, reducing the amount of time wasted on unwanted email
- Automatic backups and tailorable archiving ensure peace of mind
