

## Peak Mileage Expenses, Case Study – Biesse Group UK Ltd

We have been using Peak Mileage Expense for about 10 years. We run a fleet of about 50 vehicles all issued to field based teams. The Peak Miles tracker enables us to understand the full costs relating to our work with the added benefit of allowing us to offer fully expensed vehicles, but managing an mitigating the Fuel BiK charges through accurate data for personal use and cost recovery.

If we were unable to use Peak Mileage, managing the Fleet would be a real challenge particularly when it comes to personal use of company vehicles.

Our employees find Peak Mileage easy to use, especially now that we are installing a hard wired tracker, the user's only concern now is journey analysis as the data is even more robust.

We would certainly recommend Peak Mileage to other businesses.

Proximitum act as a trusted partner, helping us to get the most out of our fleet. Peak Miles captures a lot of data, and we are now able to use this to make business decisions to the benefit of the company as well as the users. The product is a strong cultural fit as we do not wish to micro-manage our team with intrusive monitoring and as this system keeps personal journeys personal and out of the employers hands, we have a system that engenders trust from the users whilst giving us all the information needed to manage the fleet.
